Adult and Pediatric Critical Values

Currently accepted laboratory practice is that laboratories monitor test results for exceeding critical values, so that when such occurs, appropriate notification of the responsible health care provider is completed and documented. The list of Critical Values and the procedure for reporting is submitted annually to the committee for review, revision, and approval by Logan Health Medical Center's Hospital Medical Staff.

This form should be used as a quick reference for Adult and Pediatric Critical Values.

*Always refer to the LHMC Laboratory Critical Value policy (40.G.544) for the most accurate Adult and Pediatric Critical Values.

All critical values are programmed into the LHMC Laboratory Meditech software for exact testing reference.

Mayo MICROBIOLOGY Result	Specimen source and patient details
Detection (e.g., stain, culture, PCR, antigen detection) of a clinically significant bacterium, fungus, parasite, or virus (except HIV and hepatitis A through E virus)	Blood, cerebrospinal fluid, brain tissue, amniotic fluid, ocular fluid/corneal scrapings
Identification/detection of a select agent (or other highly pathogenic organism) including, but not limited to <i>Bacillus anthracis</i> , <i>Brucella</i> species, <i>Burkholderia mallei</i> , <i>Burkholderia pseudomallei</i> , <i>Clostridium botulinum</i> , <i>Corynebacterium diphtheriae</i> , <i>Coxiella burnetii</i> , <i>Francisella tularensis</i> , monkeypox virus, variola virus, <i>Vibrio cholerae</i> , or <i>Yersinia pestis</i> . In the event of an outbreak of a novel contagious microorganism, detection of such an organism may fall into this category.	Any specimen tested
Detection of clinically significant fungi including, but not limited to members of the Zygomycetes class, dimorphic fungal pathogens (<i>Histoplasma capsulatum</i> , <i>Blastomyces dermatitidis</i> , or <i>Coccidioides</i> species), <i>Cryptococcus neoformans</i> , <i>Cryptococcus gattii</i> , or <i>Pneumocystis jiroveci</i>	Any specimen tested
Detection of <i>Strongyloides stercoralis</i> larvae	Non-intestinal specimen
Detection of herpes simplex virus or <i>Bordetella pertussis</i>	Any specimen tested from a neonate (< 1 month)
